Online Food Delivery Analysis: Data-Driven Business Insights

Customer & Order Analysis

14.Payment mode preferences

Payment mode is evenly split and doesn't vary by day type, city, cuisine, order value or cancellation rate. The data shows no payment preference.

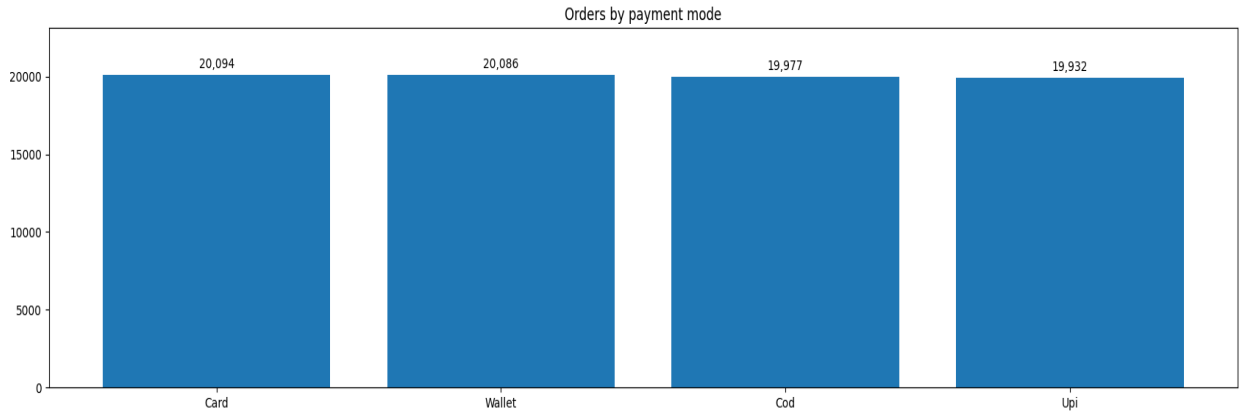

Illustrative sample records:

Payment Mode	count
Card	20094
Wallet	20086
Cod	19977
UPI	19932

2 . VISUALIZATIONS

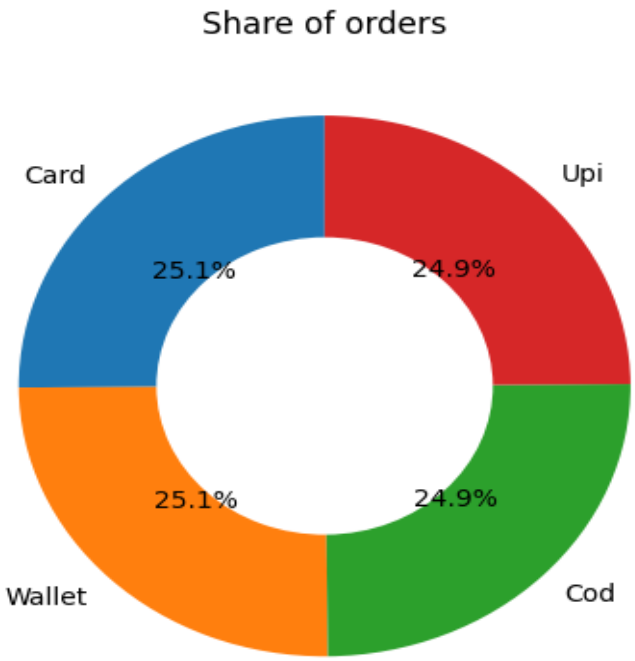

Visualization – 1

Below bar chart shows number of orders by Payment mode.

Visualization – 2

The donut shows the same even split: four equal slices of about 25% each.

Visualization – 3

Order value histogram by payment mode (% of each mode's orders).

ANALYTICAL INSIGHTS – DEMAND AND REVENUE

INSIGHT – 1: Demand is split into four equal parts.

Card has 20,094 orders, Wallet 20,086, cash on delivery 19,977 and UPI 19,932. A test for an uneven split so there's no preferred way to pay.

INSIGHT – 2: Customers use every method.

The average customer has used 3.6 of the 4 payment modes, and 94% have used three or more. Only 0.1% of customers with 4 or more orders always pay the same way, so there's no payment loyalty to build on.

INSIGHT – 3: Service is the same for every mode.

Average delivery time is 127.0 to 128.6 minutes and delivery rating 2.99 to 3.01. Payment method has no link to delivery experience.

4.ANALYTICAL INSIGHTS-OPERATIONS AND CUSTOMER EXPERIENCE:

INSIGHT-4: Analyse Most Preferred Payment Mode

Calculate and prioritize popular payment methods and ensure reliable payment experiences across all supported options.

INSIGHT- 5: Calculate mode value for payment failure rate

Identify common failure reasons and Improve payment gateway reliability, display clear error messages, and provide an easy retry option.

INSIGHT- 6 : Set clear Refund policy

Set clear refund expectations, monitor delayed refunds, and improve refund status notifications. Quick solution for refund-related complaints for each payment method.
