Online Food Delivery Analysis: Data-Driven Business Insights

Customer & Order Analysis

2. Analyse age group vs order value

Order value in this dataset is almost the same in every age group. Using the 33,370 orders where both age and order value were actually recorded. The average order is about ₹2,078 for customers aged 18 to 24, ₹2,099 for 25 to 34, ₹2,052 for 35 to 44, ₹2,106 for 45 to 54 and ₹2,035 for those 55 and over.

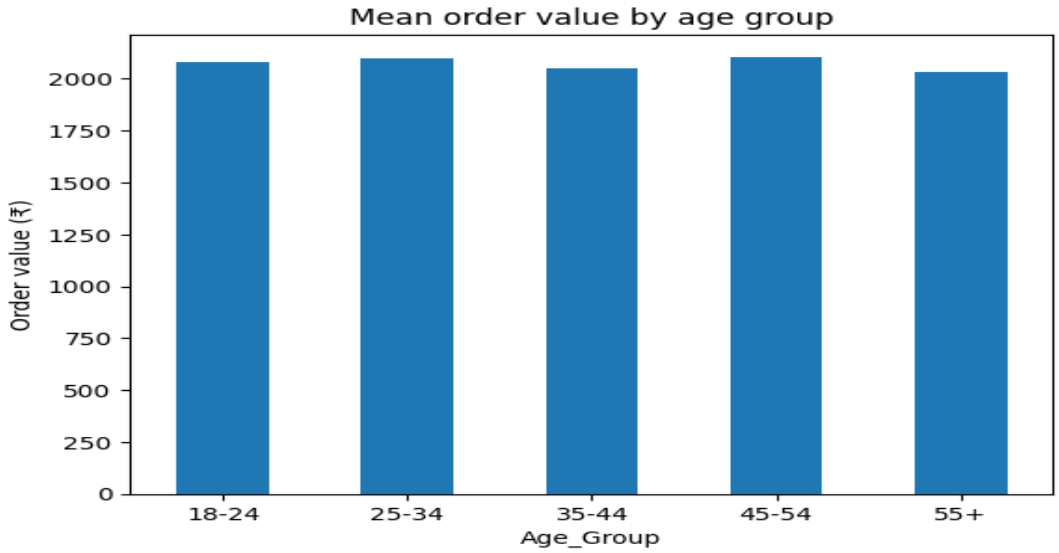

Illustrative sample records:

Age Group	orders	mean	median	std
18-24	5420	2078.4	2005.0	1542.1
25-34	7837	2098.7	2014.0	1556.1
35-44	7732	2052.4	1179.5	1536.7
45-54	7792	2106.3	2046.5	1553.3
55+	4589	2035.1	1175.0	1546.8

2 . VISUALIZATIONS

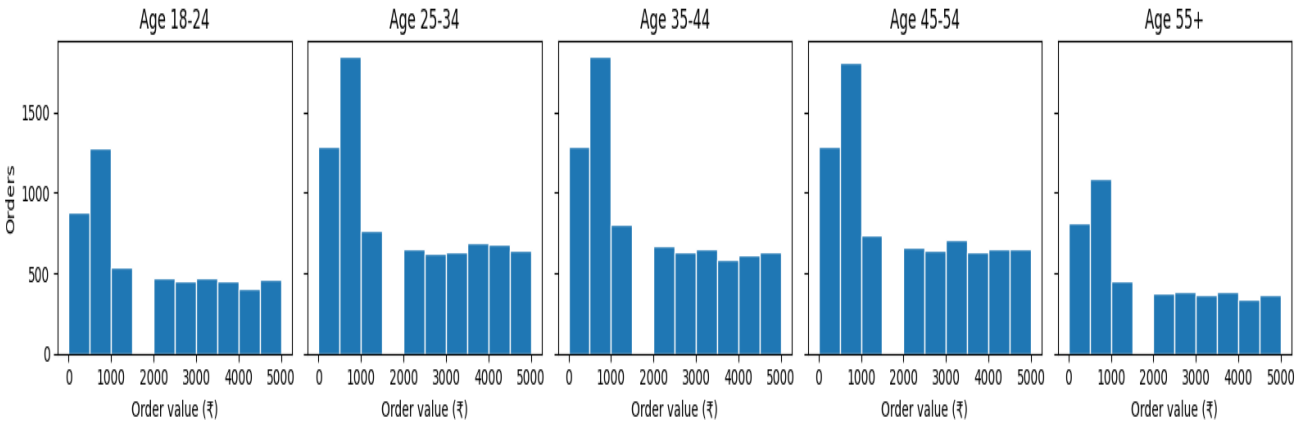

Visualization – 1

The chart shows no orders fall between ₹1,500 and ₹2,000 in any age group. Order values cluster below ₹1,500 (about 50% of orders, peaking at ₹500 to ₹1,000) and are spread evenly from ₹2,000 to ₹5,000

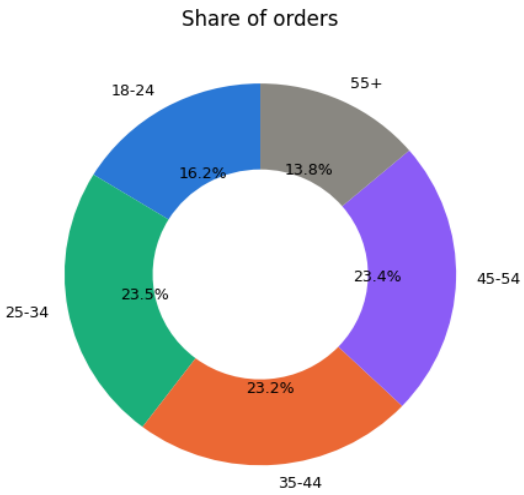

Visualization-2

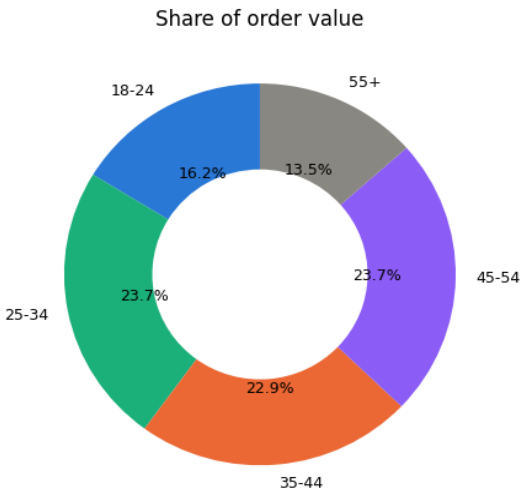

Below charts use only the orders where age and order value were actually recorded (33,370 rows).

Visualization-3

Below chart shows share of order value.

3.ANALYTICAL INSIGHTS – DEMAND AND REVENUE

INSIGHT – 1: 1. Demand follows the size of the age group, not its age.

The three middle groups each bring in about 23% of orders (the 25 to 34 group alone has 11,660), while 18 to 24 has 16% and 55+ has 14%. That's only because those groups cover fewer years of age.

INSIGHT – 2: Order size is the same at every age.

Average order value is ₹2,035 to ₹2,106 across the five groups, a spread of about 3.5%, and the correlation between age and order value is -0.003. Younger customers don't spend less per order and older customers don't spend more.

INSIGHT – 3: Age doesn't change profitability or cancellations.

Overall, demand and revenue are spread across age groups in proportion to their size.

4.ANALYTICAL INSIGHTS-OPERATIONS AND CUSTOMER EXPERIENCE:

Insight -4 : Total Revenue Contribution by Age Group

Calculate the percentage of total revenue generated by each age group and allocate marketing budgets to age segments that contribute the most revenue.

Insight -5: Calculate order frequency by age group

Encourage less-frequent customers to order more often through targeted promotions.

Insight -6: Repeat Orders and Spending Growth by Age Group

Develop targeted loyalty programs to increase repeat purchases and long-term customer value. Compare repeat purchase rates and changes in average order value over time for each age group.
