Online Food Delivery Analysis: Data-Driven Business Insights

Customer & Order Analysis

3.Weekend vs weekday order patterns

Weekdays have more orders only because there are 2.5 times as many weekdays in the year. Per day, the two are within 1% of each other. The mix of cuisines, cities, payment modes and peak-hour orders is also the same on both. Weekdays make up 71.4% of orders and 71.5% of order value, and weekends 28.6% and 28.5%.

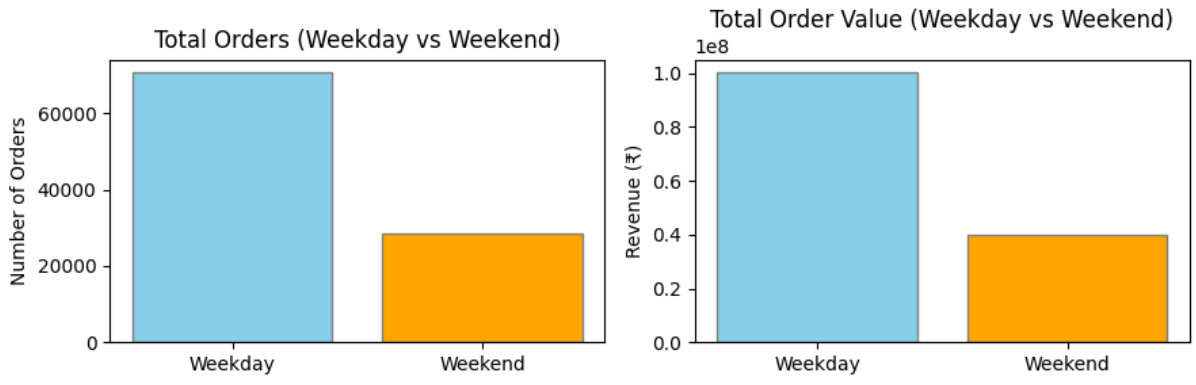

Illustrative sample records :

Order_Day	total_orders	total_order_value
Weekday	70618	100161383.0
Weekend	28368	39840014.0

The chart shows weekday vs weekend orders

3.ANALYTICAL INSIGHTS – DEMAND AND REVENUE

INSIGHT – 1: Weekdays have more orders only because there are more weekdays.

Weekdays account for 71.4% of orders and weekends 28.6%, but a year has 261 weekdays and only 104 weekend days. Per day the two are almost equal, at 270 orders on a weekday and 272 on a weekend. Demand on a weekend day is as strong as on a weekday, not weaker.

INSIGHT – 2: Service and profit are the same on both day

Weekends aren't more stressful for delivery and aren't more or less profitable. The business runs at the same level seven days a week, and costs and staffing don't need to change by day type.

INSIGHT – 3: The weekday-weekend balance holds all year.

Orders per weekend day by orders per weekday, the ratio stays less in every month. There's no season when weekends take off or fall behind, so staffing and stock plans can be the same all year.

4.ANALYTICAL INSIGHTS-OPERATIONS AND CUSTOMER EXPERIENCE:

INSIGHT- 4 : Analyse Average Order Value

Create combos and targeted promotions to increase average order value on lower-spending days.

INSIGHT- 5 : Order Volume Comparison by allocating separate delivery partners

Allocate delivery partners based on demand patterns to prevent delays during busy periods.

INSIGHT- 6 : Discount and Promotion Effectiveness

Schedule promotions when increase in orders without unnecessarily reducing margins.
